Airway Backup Checklist

This checklist should be used to prepare a patient for RSI while awaiting CCP backup.

- ✓ Pre-oxygenate by mask.
- ✓ Attach monitor, including $ETCO_2$.
- ✓ Gain IV access, preferably in two sites.
- ✓ Prepare a running line of 0.9% sodium chloride.
- ✓ Position the patient for optimal airway control.
- ✓ Place an ETT holder under the patient's head.
- ✓ Ensure suction is working and turn it off.
- ✓ Prepare a manual ventilation bag with PEEP valve.
- ✓ Maximise space and clear away unnecessary equipment.
- ✓ Consider travelling toward backup.
